

Incident Report - INC-4010

Type: Flood

Location: Zone D

Date: 2025-05-31

Severity: Low

Description:

Heavy rainfall on 2025-05-31 led to waterlogging and flooding in Zone D, disrupting roadways and low-lying areas. The incident was first reported by traffic patrols and multiple citizens via the city's safety alert system. Sewage overflow and clogged drains contributed to rising water levels, affecting both pedestrian and vehicular movement. Local shops and residential basements reported water seepage.

Action Taken:

The municipal drainage team was deployed to pump out water and clear blockages. Barricades were placed to redirect traffic, and warning signs were installed. Emergency alerts were sent to residents advising minimal movement. An urban drainage maintenance project has been prioritized for this zone.
